OLFA BLADES

Feel the difference in sharpness and durability

The superior quality of OLFA blades is the result of a multi-step production process. Only the finest quality tool steel is selected for use.

For all blades we adjust hardness, sharpening angles, tapered dimensions, the coarseness of the whetstone and the speed of grinding to ensure the blade has the best balance of sharpness and blade life according to usage.

Experience and testing have shown that 59° is the perfect angle for the snap off blade. The angle, length and width of OLFA blades have become the international standard for snap off blades.

Ultra sharp blades are the next generation of OLFA snap off blade.

Stainless steel blade with a moisture resistant quality.
